Data modeling (data modelling) is the process of creating a data model for the data to be stored in a database. This data model is a conceptual representation of Data objects, the associations between different data objects, and the rules.

Data Modelling: Conceptual, Logical, Physical Data Model Types

The three best-known models of this kind are the relational data model, the network data model and the hierarchical data model. These internal models: Consider a database as a collection of fixed-size records; Are closer to the physical level or file structure; Are a representation of the database as seen by the DBMS.
