A distribution T is 0 if and only if its support is empty. If $\phi \in \mathcal{D}'$ is identically 1 on some open set containing the support of a distribution T then $\phi T = T$. If the support of a distribution T is compact then it has finite order and furthermore, there is a constant C and a non-negative

Distribution Theory and Transform Analysis | 9780486654799 ...

Two important methods in analysis is differentiation and Fourier transformation. Unfortunately not all functions are differentiable or has a Fourier transform. The theory of distribution tries to remedy this by imbedding classical
