Secure Copy Protocol (SCP), often referred to as Secure Copy, is a protocol for computer networks that ensures the secure transfer of data between a local host and a remote host or alternatively between two remote hosts.It is based on the RCP commands (remote copy) published as part of the Berkeley r-commands by the University of California, Berkeley back in 1982.

SCP (Secure Copy) - definition, function, and syntax - IONOS

scp copies files between hosts on a network. It uses ssh(1) for data transfer, and uses the same authentication and provides the same security as ssh(1). Unlike rcp(1), scp will ask for passwords or passphrases if they are needed for authentication.. File names may contain a user and host specification to indicate that the file is to be copied to/from that host.
